

Intro to Bootstrap implementation assignment- TODOs

To dos as noted in index.html file:

Meta

- Add proper viewport to meta tag to make page properly display on mobile devices

Navigation in Bootstrap Core CSS

- Implement responsive navigation that matches IA design
- Put this on every page
- Must contain four links counting the “home link” in the nav menu
 - There may be more if we choose

Wrapper for slides

- Figure out how to get homepage to be full slider instead of current homepage
- Add images to repository and update code so carousel has proper slides in code below
 - Slide one- set the background image for this slide in code
 - Slide two- set the background image for this slide in code
 - Slide three- set the background image for this slide in code

Portfolio section (reference bootstrap grid video)

- Add the proper “row” and “col” classes to make the display work in the way it should
- This section should be contained within a row
- This section should have 4 units wide as size “md” and above, but 6 units wide at size “sm” and below
- At least six photos must be in portfolio section

Footer section

- User flex-box to replace the centered paragraph with copyright and date with 2 paragraphs; the first paragraph is left aligned and contains copyright and date and one that is right aligned and contains my name
 - Use Flexbox CSS styles to implement the left/right horizontal positioning
- Footer is on every page

****other side notes: replace all text with web site text****

- Update 404.html to reflect the actual IA of web site
- Add the chosen images to site to each page as needed- be sure to use the img-responsive class on all images that should respond to screen resizing
- Use at least two advanced CSS selectors that utilize one or more of the following: attribute selector, pseudoclass, conditional selector
- Use pseudoclasses, transition, and animation to create at least two custom instance of interactive styling

Stretch goals

- Add a completely new section to one of the pages
 - Should be responsive and recognize at least mobile and desktop viewport sizes
 - New section should fit into theme style
- Modify the styles more significantly to create an even more unique visual style
